5. Sure Foot Clear consisting of Parts A, B and C,

are acceptable as a concrete floor topping having incidental food contact in federally inspected meat and poultry plants as long as the chemical composition remains as submitted to USDA on July 16, 1985 et al. This acceptance is based on a review of the chemical constituents against appropriate FDA or USDA regulations or guidelines. Any change in formulation, label text, product or company name or address without prior USDA acceptance renders this letter void. On standing and walking surfaces, an appropriate slip resistant surface must be applied suitable for the application. The entire depth of the coating must be free of voids to prevent entrapment of contaminants. This does not constitute a USDA endorsement of the performance of this product.

Where food adulterating vapors may be generated during the preparation or installation of this product, all unprotected food and packaging materials must be moved out of the affected area. Before food and packaging materials may be returned to the area where the material has been used, the area must be sufficiently free of odor to prevent contamination of the food.

Any unacceptable condition resulting from improper installation or maintenance will be cause for the inspector to require correction.

If you have questions about the conditions of USDA acceptance call Ron Anderson of the Facilities Branch at (202) 720-7377.

Sincerely,

*Ronald W. Anderson*
